PRE-ESTIMATE

Statement of Work

Direct AI Agents

Document No.	SJ-PE-2026-001
Revision	1.0
Date	5 October 2026
Issued by	Subjektiv
Prepared for	The Client
Engagement	Design and delivery of the Direct AI Agents platform
Status	Pre-estimate. Binding only when the parties execute a Statement of Work that incorporates it.
Validity	30 days from the date of this document, through 4 November 2026
Currency	Euro (EUR)

First payment	Base	Commercial cap	Duration
€17,400	**€162,833**	**€187,258**	**9 months**

1. Purpose

Subjektiv submits this pre-estimate as the commercial and scope basis for a Statement of Work. It describes the work, the delivery milestones, the professional rates, and the commercial cap for building the Direct AI Agents platform: a white-label AI agent for Instagram Direct, in the scope of the functions the product already comprises.

This document is not an invoice and not a signed contract. Hours, dates, and amounts are planning figures. They are confirmed in the Statement of Work. The first payment is €17,400, due when the Statement of Work is signed. It is Milestone 1: confirmation of scope and the opening of the tenant platform.

2. Professional rates

The rates below are Subjektiv's professional rates for this engagement, in euro. They apply to time worked on the scope in this pre-estimate. They do not include third-party subscriptions, infrastructure, or vendor accounts.

Role	Assignment	Rate	Hours	Amount
Tech Lead	Architecture and technical direction	€36.18	336	€12,158
Backend	Node.js, TypeScript, PostgreSQL	€30.92	2,628	€81,261
Frontend	Vue administration applications	€29.61	880	€26,053
DevOps	Environments, processes, backups	€33.55	456	€15,300
QA	Acceptance against the scenarios herein	€24.10	860	€20,725
Project management	Planning, communication, control	€22.37	328	€7,336
Total			**5,488**	**€162,833**

A change of role mix during delivery does not change a milestone price already fixed in the Statement of Work. Work outside this scope is estimated separately before it starts.

3. Team and schedule

Planned duration is nine months from the start date named in the Statement of Work. Streams overlap. Peak staffing is five people. Average load is about 3.8 full-time equivalents. A second backend engineer is planned from month 3.

Month	Team	Closes
1	Tech Lead, backend, DevOps, PM	Milestone 1 — first payment, €17,400
2	QA joins	Rest of tenant isolation; Instagram starts
3–4	Second backend and frontend join	Webhooks, echo, runtime, admin shell
5–6	The same team	Shop and booking in parallel; admin screens

Month	Team	Closes
7	Backend, frontend, QA, PM	Leads, Telegram, Teach, Sandbox, assistant
8	DevOps returns	Super Admin, backups, automatic update
9	QA, Tech Lead, backend, PM	Acceptance, handover, schedule buffer

The plan assumes the team is implementing behavior that is already defined for this product. Discovery of a new product, or a material change of scope, is outside this pre-estimate.

4. Statement of work by milestone

Each milestone is limited to behavior the platform already comprises. A new messaging channel or a new CRM is a change request. Weeks are the planned length of that stream. Milestones 5, 6, and 8 run in parallel.

ID	Milestone	Weeks	Hours	Amount
M1	Foundation: scope confirmation and start of the tenant platform	6	571	€17,400
M2	Tenant isolation, remainder	3	273	€8,350
M3	Instagram / Meta channel	7	700	€20,752
M4	Agent runtime	8	780	€23,253
M5	Shop, catalog, Nova Poshta, KeyCRM	5	424	€12,448
M6	Booking: CleverBOX, BeautyPro, Altegio	8	696	€20,608
M7	Leads, events, Telegram for managers	4	272	€7,936
M8	Tenant administration	6	620	€17,934
M9	Teach, Sandbox, AI assistant	4	396	€11,642
M10	Super Admin, backups, automatic update	5	524	€16,057
M11	Acceptance and handover	3	232	€6,453
	Base	**9 mo.**	**5,488**	**€162,833**
	Contingency			**€24,425**
	Commercial cap			**€187,258**

M1. Foundation — €17,400

The first payment. Subjektiv confirms the scope of this pre-estimate, including the acceptance scenarios in Section 5, and the Client provides access to Meta, the CRM accounts in scope, and the server. The same milestone opens the tenant platform: operating-system user, PostgreSQL, process layout (api, bot, sync, admin), handling of secrets, and administrator sign-in. Acceptance: the scope list is agreed in writing, and an administrator can sign in to a first tenant environment.

Tech Lead 69 h, backend 235 h, frontend 20 h, DevOps 126 h, QA 57 h, project management 64 h.

M2. Tenant isolation — €8,350

Domain and TLS per tenant. Two tenants on one server cannot read each other’s data. Owner and manager roles are enforced. Acceptance: a record created in tenant A is not visible in tenant B.

Tech Lead 19 h, backend 125 h, frontend 12 h, DevOps 70 h, QA 31 h, project management 16 h.

M3. Instagram / Meta channel — €20,752

OAuth limited to business_management, pages_show_list, pages_read_engagement, and instagram_manage_messages. Webhook routing by the business identifier. A separate path for a manager reply sent from the Instagram application. Burst messages are joined into one turn. Shared posts, a Stories frame, voice notes on a dedicated port per tenant, vision for screenshots and PDF files, a public/debug reply mode, and one follow-up after silence. Acceptance: an inbound direct message receives one reply; a manager reply from the Instagram application is stored and does not start a new model run. The Client provides the Meta application and the required app review. Waiting time is not billed.

Tech Lead 32 h, backend 420 h, frontend 56 h, DevOps 40 h, QA 120 h, project management 32 h.

M4. Agent runtime — €23,253

The customer agent runs through the Claude Agent SDK, with the command-line path as fallback. Modes: sales, lead generation, booking, and general. Prompt versions can be activated and rolled back. One model session per turn. History follows the tenant's civil day. Internal identifiers are not shown to the customer. Confirmation of a visit that already exists does not create a new visit. Acceptance: the general mode contains the tools of the three specialized modes, and a prompt activation during a turn stops that turn.

Tech Lead 80 h, backend 480 h, frontend 16 h, DevOps 16 h, QA 140 h, project management 40 h.

M5. Shop — €12,448

Catalog from the CRM or from CSV, nightly refresh, search by price and availability, a quoted total beside the catalog total, Nova Poshta rate and tracking status only for the current buyer, a local order, a Telegram card, and a mirror into KeyCRM. Acceptance: a completed test order shows the quoted total, and another buyer's tracking number is not described.

Tech Lead 16 h, backend 240 h, frontend 80 h, QA 64 h, project management 24 h.

M6. Booking — €20,608

CleverBOX, BeautyPro, and Altegio through adapters. Routing by a single provider, by action, or by prompt. Free time is checked before a visit is created. A closed day or a missing time does not create a visit. Cancellation, removal of one service, and rescheduling are separate actions. Acceptance: a free window creates one visit; a closed day creates none; a reschedule does not leave two active visits. The Client provides CRM sandboxes and the BeautyPro marketplace grant.

Tech Lead 40 h, backend 480 h, frontend 24 h, QA 120 h, project management 32 h.

M7. Leads, events, and Telegram — €7,936

A structured lead brief, events with a period in which the agent may discuss them, one escalation card, one SLA reminder, return of the conversation to the agent after idle time, and manager commands. Acceptance: five customer messages during an escalation do not produce five cards.

Tech Lead 8 h, backend 160 h, frontend 40 h, QA 48 h, project management 16 h.

M8. Tenant administration — €17,934

Dashboard, conversations, orders, prompts, events, synchronization, CRM fields, users, and settings for the live integrations. On a phone, lists are cards, primary navigation sits at the bottom, and tap targets are at least 44 px. Acceptance: a manager cannot open prompt administration, user administration, or synchronization. The owner can.

Tech Lead 8 h, backend 140 h, frontend 360 h, QA 88 h, project management 24 h.

M9. Agent control — €11,642

Teaching produces a prompt revision that can be rolled back. The sandbox holds up to 15 cases. The AI assistant shows a metrics snapshot and writes only after the owner confirms. None of these screens sends a message to a live customer conversation.

Tech Lead 24 h, backend 140 h, frontend 160 h, QA 56 h, project management 16 h.

M10. Fleet — €16,057

Super Admin covers tenants, deployment, rollback of code when the health check fails, a nightly update when a newer version is published, backup, a restore drill, and a webhook log. Database migrations are not rolled back. Acceptance: automatic update can be switched off; a failed release returns the previous code; a restore brings back a conversation and an order.

Tech Lead 16 h, backend 160 h, frontend 88 h, DevOps 180 h, QA 56 h, project management 24 h.

M11. Acceptance and handover — €6,453

Two demonstration tenants, one shop and one salon. Subjektiv runs the scenarios in Section 5 and delivers a short operating note. For 30 calendar days after acceptance of M11, defects against those scenarios are corrected within the remaining cap. New functionality is not part of that period.

Tech Lead 24 h, backend 48 h, frontend 16 h, DevOps 24 h, QA 80 h, project management 40 h.

5. Acceptance scenarios

• A shared shop post ends as a local order, a Telegram card, and a KeyCRM record. The customer message contains no product identifier.

• A tracking number that belongs to another buyer is not disclosed. A tracking number that belongs to this buyer is.

• A free salon window creates a visit. A closed day does not. A reschedule does not leave two active visits.

• Confirmation of an existing visit does not create a new appointment.

• A lead brief reaches Telegram and the CRM. A complaint produces one escalation card.

• A manager reply from the Instagram application is visible in the admin and does not start a new generation.

• After 14 days of silence, a new conversation starts. Two tenants cannot see each other’s orders.

• An expired model login does not send the customer a failure text. The conversation list is usable at 390 px wide.

6. Commercial terms

Form. Time and materials at the rates in Section 2, subject to a cap of €187,258. Invoices are monthly, for hours worked, and are due within 5 business days. Invoices are issued in euro.

First payment. €17,400, payable when the Statement of Work is signed. It is the price of Milestone 1 and is credited against that milestone. Later invoices follow the milestone amounts in Section 4.

Contingency. €24,425 inside the cap is reserved for integration variance: undocumented CRM fields, differences between a sandbox and the live API, and corrections to echo handling and appointment slots after the first live week. Hours above the cap begin only after a written change. Unused contingency is not invoiced. The cap is a maximum.

Fixed alternative. The parties may instead fix the price at €187,258. Unused contingency is then retained by Subjektiv, and Subjektiv does not invoice overruns up to the cap. Unless the Statement of Work says otherwise, this pre-estimate assumes time and materials with a cap. The first payment remains €17,400.

Intellectual property. Rights in the code written under the Statement of Work pass to the Client when the accepted hours are paid. A rental or subscription offer is outside this document.

7. Included, excluded, and assumed

Included: delivery of M1 through M11, verification of Section 5, the operating note, and 30 days of defect correction inside the cap.

Excluded from the hours and from the cap:

• Claude subscription, servers, domains, certificates, and CRM or Meta account fees.

• WhatsApp, Viber, and Telegram as a customer channel.

• Shopify, Google Sheets, LiqPay, WayForPay, Fondy, Monobank, and creation of a shipping waybill.

• CRM systems other than KeyCRM, CleverBOX, BeautyPro, and Altegio.

• Memberships, group classes, prepayment, refunds, a third-party penetration test, and a legal opinion on GDPR.

• Authoring the prompt and catalog of one particular salon or shop.

The Client names one person authorized to accept milestones and provides Meta assets, CRM credentials, DNS, and server access in time for the relevant milestone. A delay extends the schedule and is not billed as worked time. A request to hold the team is estimated separately. The contingency covers variance inside this scope. It does not cover a new channel or a new business mode.

8. Incorporation

On execution, the Statement of Work will state the start date, the Client’s legal name, and the billing contact, and whether the commercial form is time and materials with the cap in Section 6 or the fixed alternative. This pre-estimate is then incorporated by reference. Work outside Section 4 is not authorized by this document.

9. Acknowledgement

Signing below acknowledges receipt of pre-estimate SJ-PE-2026-001. It does not by itself authorize the work or create a payment obligation. Authorization is the executed Statement of Work.
